Degrees C = Degrees Celsius.
mg/L = Milligrams per liter.
MPN/100mL = Most probable number per 100 milliliters.
mVolts = Millivolts.
NTU = Nephelometric turbidity units.
pCi/L = PicoCuries per liter.
µg/L = Micrograms per liter.
µmhos/cm = Micro ohms per centimeter.
< Indicates the measured value is less than the reporting limit.

Attachment 1. Table 1. Groundwater analytical data, Site 300, 2021.

OU	Location	Date	Sample Type	Parameter	LOS Indicator	Result	Error	Units	QA Flag

Data qualifier flags
B = Analyte found in method blank; sample results should be evaluated.
D = Analysis performed at a secondary dilution or concentration.
E = The analyte was detected below the LLNL reporting limit, but above the analytical laboratory minimum detection limit or activity.
F = Analyte found in field blank, trip blank, or equipment blank; sample results should be evaluated.
H = Sample analyzed outside of holding time; sample results should be evaluated.
I = Surrogate or tracer yield recoveries were outside of QC limits; sample results should be evaluated.
J = The analyte was positively identified; however, the associated numerical value is the approximate concentration or activity of the analyte in the sample.
L = Matrix spike recoveries not within control limits.
O = Matrix spike duplicate relative percent difference (RPD), sample duplicate RPD, or relative error ratio (RER) not within control limits.

Sample types
DUP = Duplicate sample.
REX = Resample.

PPM(V/V) = Parts per million on a volume-to-volume basis.
< Indicates the measured value is less than the reporting limit.

Data qualifier flags
B = Analyte found in method blank; sample results should be evaluated.
D = Analysis performed at a secondary dilution or concentration.
E = The analyte was detected below the LLNL reporting limit, but above the analytical laboratory minimum detection limit or activity.
F = Analyte found in field blank, trip blank, or equipment blank; sample results should be evaluated.
H = Sample analyzed outside of holding time; sample results should be evaluated.
I = Surrogate or tracer yield recoveries were outside of QC limits; sample results should be evaluated.
J = The analyte was positively identified; however, the associated numerical value is the approximate concentration or activity of the analyte in the sample.
L = Matrix spike recoveries not within control limits.
O = Matrix spike duplicate relative percent difference (RPD), sample duplicate RPD, or relative error ratio (RER) not within control limits.

Sample types
DUP = Duplicate sample.

NA = Not applicable.
PPM(V/V) = Parts per million on a volume-to-volume basis.
µg/m³ = Micrograms per cubic meter.
< Indicates the measured value is less than the reporting limit.

Data qualifier flags
B = Analyte found in method blank; sample results should be evaluated.
D = Analysis performed at a secondary dilution or concentration.
E = The analyte was detected below the LLNL reporting limit, but above the analytical laboratory minimum detection limit or activity.
F = Analyte found in field blank, trip blank, or equipment blank; sample results should be evaluated.
H = Sample analyzed outside of holding time; sample results should be evaluated.
I = Surrogate or tracer yield recoveries were outside of QC limits; sample results should be evaluated.
J = The analyte was positively identified; however, the associated numerical value is the approximate concentration or activity of the analyte in the sample.
L = Matrix spike recoveries not within control limits.
O = Matrix spike duplicate relative percent difference (RPD), sample duplicate RPD, or relative error ratio (RER) not within control limits.

Sample types
DUP = Duplicate sample.

Location naming convention
VI = Vapor intrusion
B = Building
R = Room
CORR = Corridor
CFS = Confined space
CRL = Crawl space
OUT = Outdoor
PTH = Pathway
-01 or -001 = Sample location number if multiple locations within the same room or sequential number pertaining to confined space and outdoor locations.
